PROFESSIONAL SUMMARY

Results-driven **Data Analyst & Data Modeler** with 2+ years of experience designing dimensional data models, building production-grade ETL pipelines, and delivering executive-level Power BI dashboards that drive measurable business decisions. Processed and modeled **1,000,000+ data records** across 5+ domains including retail, airline, finance, and logistics. Proficient in advanced SQL, Python (Pandas, NumPy), and star/snowflake schema design — transforming raw, multi-source datasets into governed, analytics-ready data marts. Currently pursuing an MBA in Business Analytics, combining technical depth with strategic business acumen.

CORE COMPETENCIES

Data Modeling	Star Schema · Snowflake Schema · Dimensional Modeling · Data Mart Design · ER Diagrams
SQL & Databases	Advanced SQL · MySQL · PostgreSQL · MongoDB · Query Optimization · Stored Procedures · Indexing
ETL & Data Engineering	ETL Pipeline Development · Data Cleaning · Data Transformation · Data Validation · Data Profiling
Visualization & BI	Power BI · DAX · KPI Dashboard Design · Report Automation · Drill-through Reports
Programming & Analytics	Python (Pandas · NumPy · Matplotlib) · Data Mining · Anomaly Detection · Statistical Analysis
Tools & Platforms	Excel (Power Query · PivotTables) · Git · GitHub · Jupyter Notebook · VS Code

PROFESSIONAL EXPERIENCE

Data Analyst

Miracle Information Technology | Apr 2024 – Present

- Designed and implemented **star-schema dimensional data models** for business reporting, reducing query execution time by **~35%** through proper indexing and denormalization strategies across **8+ fact and dimension tables**.
- Built and maintained **automated ETL pipelines** in Python (Pandas) and SQL to ingest, clean, and transform data from **5+ heterogeneous sources**, processing over **500,000 records monthly** into a centralized analytics data mart.
- Developed **10+ interactive Power BI dashboards** with DAX-computed KPIs (revenue trends, churn rate, operational efficiency), enabling leadership to make data-backed decisions **40% faster** across **3 business units**.
- Performed rigorous **data validation and profiling** on **200,000+ records**, identifying and resolving **15,000+ data quality issues** — improving overall reporting accuracy by **28%**.

Software Intern

BAOIAM Innovations | Sep 2023 – Mar 2024

- Cleaned and preprocessed **large-scale datasets of 80,000+ rows** using Python and Excel Power Query, resolving **12,000+ null values, duplicates, and format inconsistencies** to achieve **97% data completeness**.
- Supported senior analysts in building **weekly and monthly reporting dashboards** consumed by **4 department heads**, creating pivot-table summaries and executive slide decks for management reviews.
- Conducted **exploratory data analysis (EDA)** on **3 customer and sales datasets**, surfacing trends and outliers that informed a product pricing revision adopted in Q1.
- Documented data lineage and transformation logic for **3 core reporting pipelines**, reducing ad-hoc query turnaround time by **20%** and enabling smooth team handoffs.

KEY PROJECTS

Airline Sentiment Analysis Dashboard

Tech Stack: Python · SQL · Power BI · Star Schema · ETL

- Architected a **star schema data model** with 1 fact table and 4 dimension tables, supporting analysis of **120,000+ airline reviews** across 15 carriers and 40 routes.
- Built an end-to-end **ETL pipeline** to ingest raw CSV data, apply sentiment scoring (positive/neutral/negative), and load **120K transformed records** into a structured analytical layer.

- Delivered a **multi-page Power BI dashboard** with drill-through pages, **12 KPI cards**, and slicers by airline/route/time — reducing manual report generation from 4 hours to **under 10 minutes**.

Fraud Detection Analytics System

Tech Stack: Python · MySQL · Pandas · Anomaly Detection · SQL

- Designed a **normalized relational schema** and built SQL-based anomaly detection queries on **250,000+ transactions**, flagging **3,200+ suspicious patterns** with **~92% precision**.
- Applied statistical thresholds (z-score, IQR) in Python to identify outlier transactions across **8 fraud categories**, reducing manual fraud review effort by **30%**.

Uber Surge Analytics

Tech Stack: Python · Pandas · Matplotlib · SQL · Power BI

- Analyzed **150,000+ ride records** across 6 cities to uncover surge pricing patterns by time-of-day, geography, and weather — insights adopted to optimize driver allocation strategy.
- Created a **Power BI heat-map dashboard** with **9 interactive visuals**, enabling demand surge forecasting accuracy improvement of **22%** in peak-period planning.

Retail Sales Analysis

Tech Stack: Python · Excel · SQL · Power BI · Data Cleaning

- Cleansed and standardized a **3-year retail dataset of 95,000+ records** (missing values, inconsistent SKUs, duplicates), achieving a data completeness rate of **98.5%**.
- Built a **sales performance dashboard** tracking revenue across **12 product categories and 5 regions**, directly informing Q4 inventory planning that cut overstock costs by **18%**.

EDUCATION

MBA in Business Analytics

Dr. D.Y. Patil Management and Research Institute, Pune | 2024 – 2026 (Pursuing)

B.Com in Management Economics

Vikram University, Ujjain | 2021 – 2024
